

Immunizations, under age 2

Health Priority E: Existing, Emerging and Re-emerging Communicable Diseases

Objective E2a: By 2010, at least 90 percent of Wisconsin residents under two years of age will be fully immunized in accordance with current Advisory Committee on Immunization Practices (ACIP) recommendations.

2010 Target: Greater than or equal to 90%

Indicator: Immunizations, under age 2

Percent of Wisconsin Children Aged 19 to 35 Months Who Are Fully Immunized*

Year (N)	Percent	+/-
2000	74.2%	4.4
(N)	**	
2001	79.5%	3.9
(N)	**	
2002	80.3%	4.3
(N)	**	
2003	81.2%	4.5
(N)	516	
2004	82.9%	4.6
(N)	549	

Source: National Immunization Survey (NIS), U.S. Centers for Disease Control and Prevention (CDC), Department of Health and Human Services.

Note: The CDC and the Wisconsin Immunization Program consider NIS estimates for immunizations of children aged 19 to 35 months the preferred measure of immunizations by age two. These estimates include both children who received immunizations on time (by 24 months) and those who received them late (between 25 and 35 months).

N Number in sample. See data documentation.

+/- Confidence interval. See data documentation.

* Have completed the 4:3:1:3:3 vaccination series. See data documentation.

** Number in sample not available. See data documentation.
